A Look at One Endocrinologist's Practice During the COVID-19 Crisis

Via an online video conference with Endocrine News, Mihail "Misha" Zilberment, MD, discusses how the COVID-19 virus has changed the way he practices medicine in a hospital setting, and how his approach to treating patients may be changed forever.

26 | Bare Benches:

Research During the COVID-19 Outbreak

As the COVID-19 virus has spread around the world, more and more people are told to work from home. That includes scientists, researchers, lab techs, PhD students, and others who have had to leave the bench behind. *Endocrine News* reached out to researchers and basic scientists to see how life in their labs has changed, how they have adjusted, and what it means for their future research.

Ongoing Benefits from Continuous Glucose Monitoring in Older Patients

Two years after Medicare began covering the use of continuous glucose monitors by seniors, the advantages are becoming clear. However, patient education on the proper use of these systems is vital to their success.

38 | Bones of Contention:

The Unintended Effects of Cancer Therapy on the Bones

Therapies that can extend the life of cancer patients often have a negative impact on the skeleton, especially in those being treated for hormone-sensitive cancers. Evidence shows improvements in bone health when bisphosphonates and denosumab are administered.
